

# Nfina Remote Backup

Powered by Enveloc

## NFINA ADVANTAGE

- Universal Remote Backup will run on any Microsoft Windows® OS - servers or workstations
  - Secure 256-bit AES Encryption and remote, redundant servers provide best in class data security
- Automatic backups occur without risk of human error or forgetfulness
- Disaster Recovery, always live, 24/7 technical support ensures speed and reliability for complete and total restoration within minutes of discovery of any data loss or failure
- Functionality, backups are easily customized to fit your needs and reduce total overall storage costs
- Open File Access, back up vital files and applications without interrupting critical business functions

Nfina's Remote Backup, powered by Enveloc® provides the safest, easiest, reliable and cost-effective data backup solutions on the market today.

As one of the genuine and successful pioneers of the remote backup industry, Enveloc is constantly refining technologies and services as well as offering market-leading product enhancements to accommodate the varying needs of businesses large and small.

Enveloc has been backing up and restoring business data remotely for over 20 years. Capable of running on any Microsoft Windows® operating system, Nfina Remote Backup securely and automatically transmits data to geographically-diverse Class A Network Operation Centers located in Mobile, Alabama and Los Angeles, California, providing safe, complete, and redundant copies of your data. Nfina Remote Backup features daily backup verification and audits, as well as immediate, around the clock professional assistance from technical experts who appreciate the significance of your data.

Nfina Remote Backup comes with 24/7 US-based tech support, at no charge during business hours for installation and backup assistance as well as after-hours restoration assistance. For clients lacking IT staff, remote assistance via our software or website is also available. Clients are given the option to receive their restored data by overnight media at no charge.

## NFINA REMOTE BACKUP PRODUCTS

### Nfina LocalRemote

Utilizes any locally attached drive as an external storage device plus stores a copy of the encrypted data on the remote server. During backup, LocalRemote places a copy on the user-supplied external storage device and a redundant copy on the remote server. When restoring files, the backups on the external storage device can be accessed instantly. If the external device is damaged, lost or stolen, backups can be downloaded from the remote server. The external device may be used to store drive images at no additional cost.

### Nfina NASRemote

Offers the same offsite protection as LocalRemote with the ease of a user-supplied network attached storage (NAS) device used for onsite storage. Multiple users on a network may use the same NAS device for their backups. Backup can be restored from the NAS or safely downloaded from the remote server. The NAS device may be used to store drive images from multiple machines at no additional cost.

### Nfina Pro

Automatically back up selected files and ensuing changes to Enveloc's geographically separate Network Operation Centers. Any locally attached drive may be used to retain drive images at no additional cost.

Products	Nfina LocalRemote	Nfina NASRemote	Nfina Pro
<b>Storage</b>	One External Drive + One Data Center	One NAS Drive + One Data Center	Two Data Centers
